CREATE THE PERFECT CURING ENVIRONMENT.

Kraft Curing retractable enclosures are the most flexible and easy to use curing enclosures available for accelerated concrete curing. They require only minimal erection time and semi-skilled laborers.

RETRACTABLE ENCLOSURES ARE ECONOMICAL.

Kraft Curing will customize your retractable enclosure and specially design it based on your project parameters and local building conditions. They can be shipped within six to eight weeks of order.

THE CONCRETE CURING SPECIALIST.

KEEP IT PRODUCTIVE.

Using a Kraft Curing retractable enclosure allows you to be as productive as possible. After closing the tent, it is almost 100% air tight, providing a closed curing environment. When you are finished, you can take advantage of your space by collapsing the tent using the integrated wheels and guiding tracks.

Even enclosures as large as 30 meters (100 ft) x 15 meters (50 ft) or larger are easy to move for expansion or retraction, allowing you the most use of your space.

HOW DOES IT WORK?

Retractable enclosures rest on a galvanized steel frame that unfolds when the tent is expanded. The frame is moved on wheels so no external power is needed.

Retractable enclosures provide the ideal covered space for controlled curing of large precast products including pipe, drainage products, precast and prestress elements.
